

Composite slang Bio Diesel AGP

Definition

Gassoflex BIODIESEL SGP is an ideal hose for the use of biofuels.

Currently biodiesel is a problem for most rubber hoses that do not offer good chemical resistance, unlike composite hoses, thanks to the inner polyamide lining these are an excellent alternative in the transfer of the currente biodiesel even Alcohols and ethanol in loading / unloading tankers, wagons or in the factory

Thanks to the sturdiness of the stainless steel inner spiral, the Gassoflex BIODIESEL SGP hose can be used even in heavy marine applications.

Construction

Inner tube	: Aluminium Outer
thread spiral	: Galvanised Steel
(G) Inner lining	: Polyamide (P)
Lid	: PVC Coated Polyester Cloth

Characteristics

Standards	: EN 13765:2018
Temperature range	: -30 0 C a +100 0 C
Safety factor	: 5:1
Vacuum	: 0.9 bar
